KASTEEL This save is designed to provide maximum protection against fire and theft. With international certification from ECB-S and SP, the quality of this product is guaranteed.

FIRE PUMP (FLOATING PUMP)

A fire pump is a part of a fire sprinkler systems power supply. The pump intake is either connected to the public underground water supply piping, or a static water source (E.G., tank, reservoir, pool). The pump provides water flow at higher pressure to the sprin ler system risers and hose standpipes.
